PROFESSIONAL SUMMARY

Full-stack engineer and project manager experienced in requirements analysis, business process definition, stakeholder communication, and web application delivery. Translate user needs into documented requirements and practical system designs. Lead teams and independently deliver education, billing, assessment, and AI-assisted workflow solutions.

CORE SKILLS

Analysis & delivery: User research, requirements analysis, business process definition, project briefs, documentation, stakeholder communication, team coordination, SDLC.

Engineering: TypeScript, JavaScript, PHP, Next.js, NestJS, Laravel, Node.js, Express.js.

Data & integrations: PostgreSQL, MySQL, database design, APIs, payment gateways, WhatsApp integrations.

Operations & tools: Docker, Git, VPS deployment, server management, AI-assisted development.

EMPLOYMENT HISTORY

Full-Stack Engineer & Business Partner
Sep 2025 - Present

Nirwasita Dharma Cendekia | Bandung, Indonesia

- Designed and built a psychometric assessment platform rolled out by a state university to schools across Banten. Owned stack selection, system analysis, client communication, server setup, and security.

Project Manager
Nov 2022 - Present

Yayasan Al Ma'soem Bandung | Bandung, Indonesia

- Lead system analysis, architecture, and delivery for academic, billing, and ERP systems. Manage 5 in-house engineers and a 6-person vendor team, with QA and code review before every release.
- Introduced payment-gateway billing that eliminated overpayments, underpayments, and transfer-error refunds across approximately 2,000 payments per month.

Full-Stack Engineer
Dec 2019 - Nov 2022

Yayasan Al Ma'soem Bandung | Bandung, Indonesia

- Built academic, admissions, and parent portals end to end: requirements, database design, Laravel back end, front end, and deployment. Moved university payments, attendance, grading, and course registration from paper to online.

Freelance Full-Stack Developer & System Consultant
2019 - 2025

Independent | Remote

- Developed web applications and provided system consulting for individual clients and small and medium-sized businesses.

Full-Stack Developer & Teacher
Mar 2018 - Feb 2019

Children's House (Yayasan Cendekia Harapan) | Badung, Bali, Indonesia

- Built student grading and parent-reporting tools and an Android school health application; taught ICT and Design & Technology.

Frontend Developer
Aug 2016 - Jul 2017

Kopertis Wilayah IV Jabar Banten | Bandung, Indonesia

- Collaborated on a web application validating private-university student data, using Bootstrap 3 and Semantic UI.

SELECTED PROJECTS

Al Ma'soem Parents Info

Project Manager | Team delivery | Laravel, MySQL, JavaScript

- Led initial user research and requirements analysis; defined business processes and system direction for a parent portal connecting billing, payments, and student academic information.
- Defined a workflow in which the Finance Division issues bills with specified amounts, parents pay through payment-gateway channels, and WhatsApp and email notifications communicate billing information automatically.
- Removed the need for teachers and school staff to relay each bill individually; coordinated a team responsible for ERDs, implementation, QA, and technical documentation.

labbkpi | UIN Banten

Independent delivery | Next.js, Laravel, PostgreSQL

- Digitized paper-based psychometric assessments for a UIN Banten laboratory. The platform is now rolled out to schools across Banten, with tests on computers or phones and results after completion.
- Owned requirements analysis and documentation, architecture, development, testing, deployment, system security, and support after release.
- Supported RIASEC, DISC, DCM, VAK, and sociometry assessments, assessment reports, and Excel uploads for processing externally collected test data.

Tando

Personal product | Next.js, NestJS, PostgreSQL

- Identified the risk of signature images being reused outside their intended context and defined the product concept, user flows, architecture, and dependency choices.
- Directed AI-assisted research, documentation, and code implementation; personally tested and deployed the product, which is already in use.
- Designed QR-linked verification, watermarks, signing purposes, original-document links, expiration dates, revocation, renewal, and activity history.

Hermes Team AI

Personal workflow | Hermes, Telegram, Docker, Next.js

- Integrated a personal AI-agent workflow on the third-party Hermes framework to prepare client invoices and project progress reports through Telegram instructions.
- Connected model routing and a Docker-based environment with Mission Control visibility into agents, tasks, and activity.

ADDITIONAL PROJECT EXPERIENCE

University admissions and academic/finance portals; telemarketing lead management; school enrollment; event registration; cooperative and retail POS systems; school websites.

EDUCATION

Bachelor of Information Systems (S.Kom) | Universitas Ma'soem

Graduated 2025 | GPA 3.87

Diploma of Informatics (A.Md) | AMIK Al Ma'soem Bandung

Graduated 2016 | GPA 3.69
